

1 TRIAGE

What looks unusual?

Identify potential issues
Review alerts and logs

2 ANALYSIS

Does the evidence
support suspicion?Investigate with tools
Validate indicators

3 CORRELATION

How does this
connect?Link events and patterns
Build the story

4 ESCALATION

Do I have enough
confidence?Assess risk and impact
Decide to escalate

5 RESPONSE

What action
should we take?Contain / Monitor / Block
Mitigate the threat

6 DEBRIEF

What did we learn?

Review outcome
Capture lessons

LIVE ALERT FEED

- 08:14:02 Repeated external connection from 203.0.113.77 to WS-4471
- 08:17:45 Internal vulnerability scan completed scheduled scan
- 08:19:11 WS-4488 made connection to 203.0.113.77 (TCP/22)
- 08:21:34 Multiple failed SSH attempts from 203.0.113.77
- 08:23:02 Monitoring rule increased sensitivity for unknown IP

EVIDENCE BOARD

- network_snapshot.txt
Captured 08:14
- access.log
Captured 08:14
- baseline_compare.txt
Captured 08:22

ANALYST NOTES

Unknown external host is communicating with WS-4471 on multiple ports.
Not seen in baseline.
Investigate ownership and intent.

STAGE SUMMARY

- Reviewed initial alert
- Collected evidence
- External source identified
- Next: Validate with tools
